A Series of Educational Activity on the Built-Environmental Systems to Be in Harmony with the Global Environmental System

Masanori Shukuya
Ph.D., Professor,
Dept. of Environmental and Information Studies, Tokyo City University
Contact e-mail address: shukuya@tcu.ac.jp

Prof. Masanori Shukuya has contributed himself, together with his co-workers, to the dissemination of the scientific findings and the philosophy developed through his exergy research not only to the community of designers and builders but also to the general public.

His contribution consists of three parts: one is that he has written a couple of books on the research findings for the dissemination of the knowledge on the built environment: that is, the built environmental system must be planned and designed to be in consistent with the nature of the global environmental system; the second is that he has come up with a series of unique methods for the built-environmental education making use of a variety of simple devices that can allow lay people to make their own; the third is that he has practiced those methods together with his co-workers in a variety of occasions not only in the community of building professionals but also in the general public.
