Language inherent in Architecture

Kazunari SAKAMOTO

In this book, the author, an architect, discusses the topic of architectural theory by summarizing the knowledge he’s gained over the course of his research and design career. He focuses on the discussion of space where a sense of freedom is secured and how our daily life can be opened to the world.

The book is composed of three parts. First, an Introduction focuses on the recognition of his recent architecture, in which he also describes the logic of his architecture. Next, Part 1: Rhetoric of Architecture discusses architectural rhetoric by studying the meaning generated by architectural composition. Lastly, Part 2: The Logic of Architectural Design is an editorial that details how logic in architectural design can be established through a relationship between space and architectural composition.
