First trial of Girls Architectural Vocational Higher Education and Sustainable Activity of Gender Equality in Islamic Republic of Pakistan

Minoru ITO

The literacy rate of Pakistan is low in Asia, and the woman in the remote area is especially low for the reasons for poverty and a religious custom with 30%. And it is said that the company in which the woman finds employment is few in Pakistan. However, the woman who finds employment in the Architecture field recently has increased.

The winner revised the Department of Architecture to coeducation for the first time in a technical college (age 18-20) in Pakistan in 2010, and started the admission of the woman student of a poor hierarchy. 72 women students are learning in 1st year to 3rd year now.

There is skill competition "Chotta makan (small house) project" to aim at the technology upgrade in the student's class. The winner executed it planning so that the student may catch up with the hand drawing, 2D-3DCAD, the model making, the estimate, and the content of the land layout of a compact one room house by the process of the practice of the competition.

The gender equality will be accepted to the society by these achievements, and it wishes many women students to find employment in the design office and the construction company. Then, rich social formation development is expected to find employment, to increase the family income, to improve poverty, and to be assisted.
