

From “BOX-HOUSE Series” to “the New Generation of Japanese Housing”

I have been developing about 150 houses of BOX-HOUSE Series according to the same concept of the contemporary housing based on the theory of “the Four Layers of Architecture”. And I have been developing the temporary and the reconstruction housing of wooden log-structure for the reconstruction of TOHOKU TSUNAMI disaster. Also I produced the Broadcast University TV program for the near future housing “The New Generation of Japanese Housing” based on these practices.
