

## HEART NURSERY SCHOOL

Heart nursery school is a authorized nursery school and its capacity is 180 persons. It is a two storied reinforced-concrete (RC) structure. The site faces a road lined with various large buildings, so we made wide facade to show its presence. The lower part of this facade is piloti, and it connects the front garden with playground.

On the other hand, we put the volume to the North side to make the play ground adjacent to a neighborhood park and make the terraced garden good exposure to sunlight. The terraced garden is like a natural ground, because it is covered with various variety of plants. Also, its surface is transparent and tender, because it is covered with wire netting with twinning plants.

We planned the building as a play equipment itself. To shorten the distance between the first floor and second floor, we realized the minimum floor height (only 2.78m high) by adopting concrete void slab construction method. So children can easily climb the terraces. We'll be glad if this building remains to children's mind as their formative experience.
