

北方町庁舎

## **KITAGATA TOWN BUILDING**

The large roof is the feature of this project. The space under the eaves increased the continuity of the building inside and outside. The space supports several events and the disaster prevention park at the time of disaster. The north side street of the site as a promenade will be a center of the people's activities by enhancement of the corporations of the town hall and surrounding facilities.

The interior space is light and comfortable environment by the combination of the 4valley terraces and high side windows.

We wish people gather under the large roof and to create a publicness suitable for Kitagata-cho.
