Building for Saga Dental Association, located in Saga Prefecture. Following the concept “Open Dental Association”, the simple composition (by simple articulation and integration) connects a compact office tower and a single story hall on the ground floor with surroundings. As an environmental adjustment for sunlight and rain, the eaves change depth in response to orientation and functions, making a characteristic and integrated building appearance. The design of buildings as open hall, small compact office plan and various eaves is intended to harmonize the architecture with the surrounding environment. It doesn’t generate only the building as common space for members of organization but also the building for public space which is used by various people in the city.
