This project is a reconstruction plan of the town hall and the general branch office in Minamisanriku-cho, which suffered the tsunami of Great East Japan Earthquake. Two facilities have a communicative space named “Machidoma” with a common design for community revitalization. “Machidoma” is the bright and open space covered with the latticed beam of Minamisanriku cedar. Through the development of two facilities with common design and space, we aim not only to rebuild facilities, but also to rebuild the entire city.
